MOST RECENT		
19 Oct 2026	Radar station, Trubchevsk area	Air defence B
19 Oct 2026	Ammunition depots, Hrintal and Ternove areas	Ammunition depots and arsenals B
18 Oct 2026	Attack-drone storage, preparation and launch site, Donetsk area	Airfields and aircraft B
18 Oct 2026	Vehicle and armoured-vehicle repair base of the 'Yug' group of forces, Sukhodilsk area	Bridges, bases and supply depots B
18 Oct 2026	Petersburg Oil Terminal (Big Port of St Petersburg)	Ports and oil terminals C

~20% (of ~6.6m bpd capacity) — Share of Russian refining capacity offline at peak of Aug–Oct 2025 strike wave (attacks + planned maintenance) · Reuters calculations based on industry sources, 14 Nov 2025

3.1m t (~17% of capacity, ~1.2m bpd); total idle 6.4m t record — Drone-related idle primary refining capacity, August 2025 · Reuters calculations (via Hydrocarbon Processing), 28 Aug 2025

C

B

 Each entry is one site on one date, kept with who claimed the result and what confirms it. These are entries in this record, not a count of every strike. C = independently confirmed (satellite imagery, statements of Russian officials or companies, allied intelligence, verified media); B = claim of Ukrainian authorities only.

Why this is on an evidence record. Recorded because these facilities fuel Russia’s war and its export revenue. The record states what was reported and by whom; it does not assess the lawfulness of individual strikes.

The record was started in October 2026 and is filled backwards from sources; recent months are fuller than earlier ones, so it does not show a trend.

WHAT WE ASK. Russia rebuilds these facilities with imported equipment and pays for the war with what they export. Enforce the oil price cap and shadow-fleet sanctions, stop imports of Russian oil products, and restrict the dual-use parts used to repair them.
